| Schedule Exam | Pearson VUE |
| Sample Questions | Microsoft Administering Windows Server Hybrid Core |
| | Infrastructure Sample Questions |
| Practice Exam | Microsoft AZ-800 Certification Practice Exam |

Enhance Knowledge with AZ-800 Sample Questions:

Question: 1

Your network contains a multi-site Active Directory Domain Services (AD DS) forest. Each Active Directory site is connected by using manually configured site links and automatically generated connections.

You need to minimize the convergence time for changes to Active Directory. What should you do?

- a) For each site link, modify the replication schedule.
- b) For each site link, modify the site link costs.
- c) Create a site link bridge that contains all the site links.
- d) For each site link, modify the options attribute.

Answer: a

Question: 2

Your organization uses a hybrid identity model for accessing both Azure-based and onpremises services. The Azure Active Directory Connect (Azure AD Connect) sync service is running on a dedicated server in your on-premises network; however, it has been decided that Active Directory (AD) passwords should not be stored in any form in the cloud.

You need to enable this using the Azure AD Connect application. What should you do?

- a) Enable password hash synchronization.
- b) Select Do not configure in the User sign-in options.
- c) Enable Pass-through authentication.
- d) Delete user identities in Azure AD for your organization.

Answer: c

Question: 3

You plan to deploy a containerized application that requires .NET Core. You need to create a container image for the application. The image must be as small as possible.

Which base image should you use?

- a) Windows Server
- b) Nano Server
- c) Windows
- d) Server Core

Answer: b

Question: 4

You have a server named Server1 that hosts Windows containers. You plan to deploy an application that will have multiple containers. Each container will be on the same subnet. Each container requires a separate MAC address and IP address.

Each container must be able to communicate by using its IP address. You need to create a Docker network that supports the deployment of the application.

Which type of network should you create?

- a) NAT
- b) transparent
- c) I2bridge
- d) I2tunnel

Answer: b

Question: 5

You have an on premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You plan to implement self-service password reset (SSPR) in Azure AD.

You need to ensure that users that reset their passwords by using SSPR can use the new password resources in the AD DS domain.

What should you do?

- a) Deploy the Azure AD Password Protection proxy service to the on premises network.
- b) Run the Microsoft Azure Active Directory Connect wizard and select Password writeback.
- c) Grant the Change password permission for the domain to the Azure AD Connect service account.
- d) Grant the impersonate a client after authentication user right to the Azure AD Connect service account.

Answer: b

Question: 6

You are planning the implementation Azure Arc to support the planned changes. You need to configure the environment to support configuration management policies What should you do?

- a) Hybrid Azure AD join all the servers.
- b) Create a hybrid runbook worker m Azure Automation.
- c) Deploy the Azure Connected Machine agent to all the servers.
- d) Deploy the Azure Monitor agent to all the servers.

Answer: c

Question: 7

What should you implement for the deployment of DC3?

- a) Azure Active Directory Domain Services (Azure AD DS)
- b) an Azure virtual machine
- c) an Azure AD administrative unit
- d) Azure AD Application Proxy

Answer: b

Question: 8

You have an Azure virtual machine named VM1 that runs Windows Server. You have an Azure subscription that has Microsoft Defender for Cloud enabled.

You need to ensure that you can use the Azure Policy guest configuration feature to manage VM1. What should you do?

- a) Add the PowerShell Desired State Configuration (DSC) extension to VM1.
- b) Configure VM1 to use a user-assigned managed identity.
- c) Configure VM1 to use a system-assigned managed identity.
- d) Add the Custom Script Extension to VM1.

Answer: c

Question: 9

You have a Windows Server container host named Server1 and a container image named image1. You need to start a container from image1. The solution must run the container on a Hyper-V virtual machine.

Which parameter should you specify when you run the docker run command?

- a) --expose
- b) --privileged
- c) --runtime
- d) --isolation
- e) --entrypoint

Answer: e

Question: 10

Your network contains an Active Directory Domain Services (AD DS) domain. You have a Group Policy Object (GPO) named GPO1 that contains Group Policy preferences. You plan to link GPO1 to the domain.

You need to ensure that the preference in GPO1 apply only to domain member servers and NOT to domain controllers or client computers. All the other Group Policy settings in GPO1 must apply to all the computers. The solution must minimize administrative effort.

Which type of item level targeting should you use?

- a) Domain
- b) Environment Variable
- c) Security Group
- d) Operating System

Answer: d

What Study Guide Works Best in Acing the Microsoft AZ-800 Administering Windows Server Hybrid Core Infrastructure Certification?

The AZ-800 study guide is a combination of some proven study tips and the combination of all valuable study materials like sample questions, syllabus and practice tests in one place.

Explore the Syllabus Topics and Learn from the Core:

If you are determined to earn success in the Administering Windows Server Hybrid Core Infrastructure exam, getting in full touch of the <u>syllabus</u> is mandatory. During preparation, you might not like all syllabus sections or topics, but try to get at least the fundamental knowledge from the sections you don't like. The more you possess knowledge on all syllabus sections, the more is the chance to attempt maximum number of questions during the actual exam.

Make Your Schedule:

Studying and completing the syllabus becomes easier, if you work on the syllabus topics after making a schedule. Your study schedule must mention what areas you want to cover and within what time. Once you make a schedule and follow it regularly, syllabus completion becomes easier and preparation becomes smoother.

Get Expert Advice from the Training:

If there is related Microsoft training, don't miss out the chance to join. Training enhances the practical knowledge of a candidate, which helps them to work well in the practical field during projects.

Get Access to the PDF Sample Questions:

If your study material is in a <u>PDF format</u> or the materials are mobile-friendly, what could be better than that? Get access to the free sample questions and keep enhancing your knowledge beyond the syllabus.

Avoid Dumps and utilize the Microsoft AZ-800 Practice Test:

Why should you rely on practice tests? The reason is simple: you must get familiar with the exam pattern before reaching the exam hall. An aspirant aware of the exam structure and time management during the exam preparation can perform well in the actual exam and attempt the maximum number of questions during the exam.

Many aspirants prefer to read from dumps, but they miss out on the self assessment method. Therefore, AZ-800 practice tests always stand out to be the better choice than dumps PDF.

Avail the Proven AZ-800 Practice Test for Success!!!

Do you want to pass the AZ-800 exam on your first attempt? Stop worrying; EduSum.com is here to provide you the best experience during your Microsoft Administering Windows Server Hybrid Core Infrastructure preparation. Try out our free mock tests to get a glimpse of our quality study materials, and build your confidence with the premium AZ-800 practice tests. Our expert-designed questions help you to improve performance and pass the exam on your first attempt.
