## Get an Overview of the HPE6-A79 Certification:

Who should take the [HPE6-A79 exam](#)? This is the first question that comes to a candidate's mind when preparing for the Aruba ACMX certification. The HPE6-A79 certification is suitable for candidates who are keen to earn knowledge on the Networking and grab their Aruba Certified Mobility Expert (ACMX). When it is about starting the preparation, most candidates get confused regarding the study materials and study approach. But HPE6-A79 study guide PDF is here to solve the problem. HPE6-A79 PDF combines some effective sample questions and offers valuable tips to pass the exam with ease.

## Why Should You Earn the HPE HPE6-A79 Certification?

There are several reasons why one should grab the HPE6-A79 certification.

- The Aruba ACMX certification proves to be one of the most recognized certifications.
- The certification badge proves the knowledge of the candidate regarding subject matters and makes his resume presentable to potential candidates.
- Thus earning the [Aruba Certified Mobility Expert \(ACMX\)](#) is a powerful qualification for a prosperous career.

## What Is the HPE HPE6-A79 Aruba ACMX Certification Exam Structure?

Exam Name	Aruba Certified Mobility Expert (ACMX)
Exam Code	HPE6-A79
Exam Price	Developed Countries: \$260 (USD) Emerging Countries: \$145 (USD)
Duration	120 mins
Number of Questions	60
Passing Score	65%
Books / Training	<a href="#">Aruba Advanced Mobility Troubleshooting and Solutions, Rev. 20.21</a>

Schedule Exam	<a href="#">Pearson VUE</a>
Sample Questions	<a href="#">HPE Aruba ACMX Sample Questions</a>
Practice Exam	<a href="#">Hewlett Packard Enterprise HPE6-A79 Certification Practice Exam</a>

## Enhance Knowledge with HPE6-A79 Sample Questions:

### Question: 1

A network administrator assists with the migration of a WLAN from a third-party vendor to Aruba in different locations throughout the country. In order to manage the solution from a central point, the network administrator decides to deploy redundant Mobility Masters (MMs) in a datacenter that are reachable through the Internet.

Since not all locations own public IP addresses, the security team is not able to configure strict firewall policies at the datacenter without disrupting some MM to Mobility Controller (MC) communications. They are also concerned about exposing the Ms to unauthorized inbound connection attempts.

What should the network administrator do to ensure the solution is functional and secure?

- a) Deploy an MC at the datacenter as a VPN concentrator
- b) Block all inbound connections, and instruct the MM to initiate the connection to the MCs.
- c) Block all ports to the MMs except UDP 500 and 4500.
- d) Install a PEFV license, and configure firewall policies that protect the MIA

**Answer: c**

### Question: 2

An Aruba Mobility Master (MM) – Mobility Controller (MC) solution is connected to a wired network that is ready to prioritize DSCP marked traffic. A group of WMM-enabled clients sends traffic marked at L2 only.

What must the network administrator do to map those markings to DSCP equivalent values when traffic is received by the APs?

- a) Enable WMM in the SSID profile.
- b) Enable WMM in the VAP profile.
- c) Enable Skype4Business ALG Support.
- d) Enable traffic to be marked with session ACLs.

**Answer: b**

**Question: 3**

A company offers guest access with an open SSID and an internal Mobility Controller (MC) captive portal. The network administrator needs to integrate a more scalable solution with a remote RADIUS and captive portal server.

The network administrator fully deploys a guest solution with self-registration in ClearPass, and defines the MC as a RADIUS client. Next, the network administrator defines ClearPass as a RADIUS server and adds it into a server group in the MC.

Which two configuration components must the network administrator modify in the MC to complete the deployment?

(Select two.)

- a) AAA server profile
- b) Initial role firewall policies
- c) VAP profile
- d) Authentication server group
- e) Captive portal profile

**Answer: b, e**

**Question: 4**

Users run encrypted Skype for Business traffic with no WMM support over an Aruba Mobility Master (MM) – Mobility Controller (MC) based network.

When voice, video, and application sharing traffic arrive at the wired side of the network, all the flows look alike due to the lack of L2 and L3 markings

How can the network administrator identify these flows and mark QoS accordingly?

- a) Confirm the MC is the Openflow controller of the MMs and Openflow is enabled in VAP and the firewall roles. Then enable WMM in a VAP profile.
- b) Use a media firewall policy that match these three flows, and use permit and TOS actions with 56, 40, and 34 values for voice, video, and application sharing, respectively. Then enable the Skype4Business ALG in the UCC profiles.
- c) Confirm the MC is the Openflow controller of the MMs and Openflow is enabled in VAP and the firewall roles. Then enable the Skype4Business ALG in the UCC profiles.
- d) Confirm the MM is the Openflow controller of the MCs and Openflow is enabled in VAP and the firewall roles. Then integrate the MM with the Skype4Business SDN API, and enable the Skype4Business ALG in the UCC profiles.

**Answer: d**

**Question: 5**

An organization has several RAPs at different locations that broadcast two SSIDs. The internet-only SSID is in bridge/always mode, and the corporate SSID is in split-tunneling/standard mode. The network administrator deploys 10 more RAPs in different locations.

Users can successfully connect to the corporate SSID that is propagated by a RAP at a remote location. However, they report that it takes too long to access public internet web sites.

What is one part of the configuration that should be checked by the network administrator to verify this RAP deployment?

- a) User roles policies
- b) IP pool
- c) Operating mode
- d) Assigned VLAN

**Answer: a**

**Question: 6**

A network administrator is in charge of a Mobility Master (MM) - Mobility Controller (MC) based network security. Recently the Air Monitors detected a Rogue AP in the network and the administrator wants to enable "Tarpit" based wireless containment.

What profile must the administrator enable "tarpit" wireless containment on?

- a) IDS Unauthorized device profile
- b) IDS General profile
- c) IDS profile
- d) IDS DOS profile

**Answer: a**

**Question: 7**

A network administrator has racked up a 7210 Mobility Controller (MC) that will be terminating 200+ Aps on a medium-size branch office. Next, the technician cabled the appliance with 4SPF+ Direct Attached Cables (DACs) distributed between two-member switching stack and powered it up.

What must the administrator do next in the MCs to assure maximum wired bandwidth utilization?

- a) Map the four physical ports to port channel 0.
- b) Disable spanning tree and allocate unique VLANs to each port.
- c) Manually set 10Gbps speeds on all ports.
- d) Configure the same MSTP region that the switches have.
- e) Make all ports trunk interfaces and permit data VLANs.

**Answer: c**

**Question: 8**

A network administrator is in charge of a Mobility Master (PAM) – Mobility Controller (MC) based WLAN. The administrator has deployed an Aruba Management Platform (AMP) server in order to improve the monitoring capabilities and generate reports and alerts.

The administrator has configured SNMPv3 and Admin credentials on both the MIAs and PACs and has created Groups and Folders in the AMP server.

What two additional steps must the administrator do in order to let Airwave monitor the network devices?

(Choose two.)

- a) Manually add the Active MIA and wait for automatic Discovery.
- b) Map the AMP's IP address with a mgmt-config profile in the MIA
- c) Set the AMP's IP address and Org string as DHCP option 43.
- d) Manually add each MM, MC and Access Point in the AMP server.
- e) Move "New" devices into a group and folder in Airwave.

**Answer: a, b**

**Question: 9**

A company with 50 small coffee shops in a single country requires a single mobility solution that solves connectivity needs at both the main office and branch locations. Coffee shops must be provisioned with local WiFi internet access for customers.

The shops must also have a private WLAN that offers communication to resources at the main office to upload sales, request supplies through a computer system, and make phone calls if needed. In order to simplify network operations, network devices at the coffee shops should be cloud managed.

Which technologies best meet the company needs at the lowest cost?

- a) IAP VPN
- b) SD-Branch
- c) Activate with RAPs
- d) BOC with CAPs

**Answer: b**

**Question: 10**

A customer wants a WLAN solution that permits Aps to terminate WPA-2 encrypted traffic from different SSIDs to different geographic locations where non-related IT departments will take care of enforcing security policies.

A key requirement is to minimize network congestion, overhead, and delay while providing data privacy from the client to the security policy enforcement point.

Therefore, the solution must use the shortest path from source to destination. Which Aruba feature best accommodates this scenario?

- a) Inter MC S2S IPsec tunnels
- b) Inter MC GRE tunnels
- c) Multizone Aps
- d) VIA
- e) RAPs

**Answer: e**

## What Study Guide Works Best in Acing the HPE HPE6-A79 Aruba ACMX Certification?

The HPE6-A79 study guide is a combination of some proven study tips and the combination of all valuable study materials like sample questions, syllabus and practice tests in one place.

### Explore the Syllabus Topics and Learn from the Core:

If you are determined to earn success in the Aruba ACMX exam, getting in full touch of the [syllabus](#) is mandatory. During preparation, you might not like all syllabus sections or topics, but try to get at least the fundamental knowledge from the sections you don't like. The more you possess knowledge on all syllabus sections, the more is the chance to attempt maximum number of questions during the actual exam.

### Make Your Schedule:

Studying and completing the syllabus becomes easier, if you work on the syllabus topics after making a schedule. Your syllabus must mention what areas you want to cover and within what time. Once you make a schedule and follow it

regularly, syllabus completion becomes easier and preparation becomes smoother.

### **Get Expert Advice from the Training:**

Do not forget to join the HPE HPE6-A79 training if it is providing any. Training enhances the practical knowledge of a candidate, which helps them to work well in the practical field during projects.

### **Get Access to the PDF Sample Questions:**

If your study material is in a [PDF format](#) or the materials are mobile-friendly, what could be better than that? Get access to the free sample questions and keep enhancing your knowledge beyond the syllabus.

### **Avoid Dumps and Utilize the HPE HPE6-A79 Practice Test:**

Why should you rely on practice tests? The reason is simple: you must get familiar with the exam pattern before reaching the exam hall. An aspirant aware of the exam structure and time management during the exam preparation can perform well in the actual exam and attempt the maximum number of questions during the exam.

Many aspirants prefer to read from dumps, but they miss out on the self assessment method. Therefore, HPE6-A79 practice tests always stand out to be the better choice than dumps PDF.

### **Avail the Proven HPE6-A79 Practice Test for Success!!!**

Do you want to pass the HPE6-A79 exam on your first attempt? Stop worrying; we, CertFun.com are here to provide you the best experience during your Aruba Certified Mobility Expert preparation. Try out our free mock tests to get a glimpse of our quality study materials, and build your confidence with the premium [HPE6-A79 practice tests](#). Our expert-designed questions help you to improve performance and pass the exam on your first attempt.
